

Connectivity - Leased Lines

What is a Leased Line?

A Leased Line is a permanent, always on connection between two locations. It is a dedicated, private line and does not carry communications from other businesses, resulting in a guaranteed level of service. The line can be used for data, video and voice and is most cost effective if the Internet is heavily used. High speed connections can be used cost effectively and up to 155Mbps are available.

Who would benefit from a Leased Line?

- Companies with separate office locations that regularly share a lot of data
- Companies with separate office locations who want to use VoIP

What benefits would a Leased Line bring my business?

- Cost effective for heavy Internet users
- High speed data throughput
- Private point-to-point connection, with no contention ratios
- Fixed charges regardless of usage, allowing accurate budgeting
- A guaranteed high level of service with vastly reduced latency and jitter
