datanet.co.uk Business Class Internet

To update your DNS Settings

Before you start you will need to know the IP address of the DNS to use - if you don't know this you'll need to ask your system administrator or ISP.

To set your DNS, you need to find the Internet Protocol window:

For Users on a Dial-up Connection:

Go to My Computer>Dialup Networking. Right-click your internet connection and select Properties. A window will open - click the Server Types tab. Click TCP/IP Settings.

For All Other Users:

Go to Control Panel>Network Connections and select your local network. Click Properties, then select Internet Protocol (TCP/IP). Click Properties.

You will see a window like the one below - this is the *Internet Protocol* window. Select "Use the following DNS server addresses" and enter the desired DNS server(s) in the space(s) provided.

Internet Protocol (TCP/IP) Properties	2 🛛
General	
You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.	
Obtain an IP address automatical	y
• Use the following IP address:	
IP address:	10 1 0 8
Subnet mask:	255 . 255 . 255 . 0
Default gateway:	10 1 0 254
Obtain DNS server address autor	atioally
Output to the following DNS server address of the server addres	tresses:
Preferred DNS server:	80 . 68 . 34 . 6
Alternate DNS server:	77 . 241 . 177 . 2
Advanced	
	OK Cancel

Note: To add more DNS servers, click Advanced then the DNS tab.
