

HOW DATANET ARE HELPING SHAPE THE "NEW NORM"

CLOUDFILES

You CAN share your company files easily and securely with your staff and remote offices without any servers on your premises. We take care of your files on our secure CloudFiles servers and you can access from your computer, phone, or tablet. Any changes you make will sync across your files and account. **NB:** This is a business alternative to Drop Box and One Drive from a people friendly UK data centre providing the best way to share your files securely with your staff. We are not Google or Microsoft, we are local and helpful.

VPN GATEWAY

Add significant additional capacity to your network when you offload some of the work on to a Datanet remote access gateway. Our qualified technicians will install and maintain the VPN connection for you, all done with your existing equipment. **NB:** The Datanet SSL VPN Gateway is hosted in our high capacity data centre, managed by Datanet and available to provide a secure SSL VPN Gateway from your home workers to resources on your office LAN using your legacy office firewall as the point of access, so you don't need any additional onsite equipment.

OFFICE 365 BACKUP

Get Veeam backup for Microsoft Office 365 and RansomGuard powered by Veeam Cloud Connect provisioned within the same business day - Backing up your Desktops and Office 365 application data has never been so simple! **NB:** Microsoft does a very good job on making sure your Office 365 data is always available but what about if you accidentally delete files or emails or a disgruntled colleague deletes data or you just make a mistake and want to access an archive copy? That isn't Microsoft's responsibility and that's where Veeam Backup for Office 365 has you covered.

REPLICATION

Should you suffer a major outage at your premises you can launch your servers on a high-performance platform in our data centre. A swift RPO/RTO of 4 hours is offered at a very attractive OPEX price point. **NB:** This service is based on Veeam Backup & Replication, so long as we are looking after your data we can spin us servers for you in a matter of hours complete with your latest files and data.

RELOCATION

Datanet have partnered with Sunspeed to help bridge the gap. Sunspeed is a leading IT relocation company that specialises in helping organisations move their critical IT equipment. **NB:** Now that we have all had a very positive remote home working experience, you might be thinking of downsizing your office and we can help move your IT equipment into our data centre together with our relocation specialists.

REMOTE HANDS

To save you coming into the data centre we offer extended remote and smart hands so if you need a hot swap hard drive changing or some hardware fitting in your rack, just send it to us... try us and see how helpful we can be, all reasonable requests accepted... **NB:** In these extraordinary times and to help with the "New Norm" way of working we are providing even more help to our Rack & CoLocation & Hosting customers.
